# OpenESB Newsletter
March 2015

Editorial

For many months, the community did not give news about OpenESB. Many of us had strong constraints and we were short on time, we worked hard on a new edition named OpenESB Standalone Edition. This edition marks a new step in OpenESB use. Running without any container, OpenESB SE needs a simple JVM and less than 200 Mo to run in a light configuration. Unlike to the OE legacy editions, OE-SE fits perfectly with the new architectures such as virtualisation and cloud. Users don't require additional Glassfish skills anymore to deploy a platform of services. OE-SE can be easily deployed in light container (ex: Docker) and runs swiftly in a multi-instance mode. Except for features directly linked with Glassfish application server, OpenESB Standalone is backward compatible with the previous legacy versions. At the same time, we prepared a new edition for Glassfish which will run on Glassfish 4.x and be compatible with the legacy versions. This edition is planned to be issued in 15Q2. Both editions required a lot of efforts for each one of us. We would like to thank David, Vishnu, Prabhu, Fred, Paul, Nicolas, Yoram and many others for the work they have produced. Thanks to Logicoy and Pymma for their unswerving support. We are happy and proud to release these new editions for OpenESB: the best integration tool on the open source landscape. Thank you for your support and your feedback contact@open-esb.net.

OpenESB 3.01 Standalone edition download

The new OpenESB standalone edition version 3.0.1 can be downloaded on the community website www.open-esb.net. You must be registered and logged on the website to get the binaries. Registration is simple and quick! Please fill in the registration form with accurate data.

OpenESB in the insurance

Humanis is one of the top insurance companies in France with more than 700 000 companies and more than 10 million of insured. Humanis decided to migrate its service infrastructure to OE Standalone edition. Humanis architects and developers provided the community with a high value feedback when testing OE-SE beta versions. In January, Humanis signed a consulting support agreement with Pymma (www.pymma.com) and started the migration and seized this opportunity to lighten their infrastructure taking out Glassfish server from its service oriented platform.

OpenESB all around the world: Galicia (Spain)
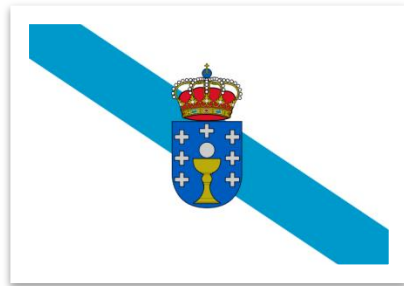

We are pleased to inform you that a conference on OpenESB will take place on the 10th of Mars in Santiago de Compostela, with Galicia government support (Thanks to Alejandro). During this conference, Paul Perez from Pymma and Marti Pamies from Vico will lecture on OpenESB's new features, architectures and solutions for healthcare integration. More detail here: https://cntg.xunta.es/web/cnt/acontecimientos

Marti Pamies

OpenESB all around the world: Barcelona (Spain)

One of best Spanish OpenESB's company support Vico (http://www.vico.org). Vico is an engineering firm specializing in methodology and quality in software development projects; it also provides assistance to scientific societies such as HL7 Spain and HL7 International in their training programs on international standards of

healthcare information systems. Vico developed and implemented a complete Healthcare solution based on OpenESB. You can contact Vico by email: innova@vico.org or by phone +34 933 894 861 for any further detail.

Latest news on OpenESB

OpenESB certification

Congratulations to Paul Perez, who successfully passed the OpenESB certification. Companies are looking for well-trained and highly experienced specialists to architect and implement their integration systems. This certification provides validation of your SOA and ESB skills. Information available only at contact@open-esb.net

Social events

- To Rivka and Bessalel: Congratulations on their weeding.

Our sponsor this month:

For many years, Pymma has been a key actor in the Integration and SOA open source landscape. Founders and one of the main sponsors of the community, Pymma proposes the best knowledge, and consulting on integration and service oriented technologies. Bank, Insurance, Retail, Finance companies relied on its background to develop integration projects and service oriented platforms.

Pymma developed a unique skills and expert's network on the market. It offers OpenESB's high-end services, training, consulting, development and support at all stages of your service oriented approach. By starting a partnership with Pymma, our customers take advantage from the most knowledgeable team on the best integration tool on the market! Contact: Pymma by email: **contact@pymma.com**
